

Customer-specific sensor development

Special force transducers – fast and individual

Save costs and time when designing your new test machine, jointing press or other equipment by taking advantage of the know-how and longstanding experience at A.S.T. GmbH Dresden in the field of force measurements. Our engineers use the latest computer programs to design the perfect device for your particular application.

The solution is often simpler than you think – you design a machine part to measure the force, and A.S.T. then looks after all the details. There are naturally a few general prerequisites to be observed to ensure the desired level of accuracy, but the technical sales team at A.S.T. is available to assist you at every stage of the process. A customer-specific solution can then be manufactured at an acceptable price even for smaller batches. Here, again, A.S.T. GmbH is your ideal partner. We have not only a team of experienced design engineers, but also a highly flexible machining department and ultra-precise testing equipment for the manufacturing of strain gauge force transducers.
